Listing of Claims:

Claims 1-14 (Canceled).

Claim 15 (Currently amended): An apparatus comprising:

a shaft having open proximal and distal ends defining a lumen therethrough;
an inflatable bladder disposed at the distal end of the shaft and in fluid communication with the lumen, the inflatable bladder upon inflation having a shape selected from the group consisting of: eccentric, conical, and wedge-shaped; and
a cannula having an opening at a proximal end portion, an opening at a distal end portion, and defining a passage therethrough, the passage configured to receive the shaft and deploy the bladder at a target site in tissue, the inflatable bladder configured to separate adjacent layers of tissue when the inflatable bladder is inflated ~~and axially moved with respect to the cannula,~~ thereby defining a working space.

Claim 16 (Previously presented): The apparatus of claim 15, wherein the inflatable bladder does not substantially stretch when fully inflated.

Claim 17 (Previously presented): The apparatus of claim 15, wherein the inflatable bladder operates at pressures from about 10 mmHg to about 1000 mmHg.
